SUMMARY

B.Tech CSE-AIML student, with hands-on experience in data preprocessing and cloud migration as a Data Science Intern, and independent projects spanning computer vision, NLP, and ML pipelines. Seeking to apply practical data science and software engineering skills to real-world problems.

PROFESSIONAL EXPERIENCE

Data Science Intern - Coded Minds **May 2026 - Present**

- Cleaned and preprocessed large-scale datasets (millions of rows) using Python (Pandas, NumPy) and SQL, improving data quality and consistency for downstream analysis
- Contributed to migrating a company's on-premises data infrastructure to AWS cloud servers, supporting a more scalable and accessible data pipeline
- Performed exploratory data analysis to identify patterns and inconsistencies, streamlining the preprocessing workflow for the team

EDUCATION

B.Tech CSE-AIML - GLA University, Greater Noida **2024-28**

CPI : 8.89

PROJECTS

AI Dataset Doctor - Python, OpenCV, Pillow, NumPy, Pytest | Github Link

- Built a modular Python pipeline to audit and clean image datasets — detecting corrupted files, duplicates, blur, and low-resolution samples
- Supported configurable batch processing and non-destructive quarantine of flagged images; architected for future AI-based checks (similarity, leakage, mislabeling)

Database Deployment Automation Framework - Python, SQL Server, pyodbc | Github Link

- Built a Python framework automating SQL DDL execution on SQL Server, handling batch processing (GO separators), complex DDL, and SQL Server's transaction restriction on CREATE DATABASE
- Logged every deployment (script, timestamp, duration, status, errors) to a central audit table, replacing manual, unauditable deployments

Fault-Tolerant Distributed Job Queue - Python, Redis, Flask

- Built a distributed task queue with a concurrent worker pool supporting parallel job execution, automatic retries with exponential backoff, and dead-letter handling for repeatedly failing jobs
- Instrumented real-time observability (throughput, p95 latency, failure rate, queue depth) via a lightweight monitoring dashboard
- Load-tested under simulated failures and burst traffic, sustaining 50 jobs/sec at 97% success rate

Document Layout Recognition - TensorFlow, CNN, OpenCV | Github Link

- Implemented CNN-based document layout analysis in TensorFlow for multi-class structural segmentation
- Optimized model performance through training on annotated datasets and hyperparameter tuning

Hospital Management System - Python, OOP, DSA | Github Link

- Built a system to manage patient, doctor, and appointment records with add, search, and display functionality
- Implemented robust error handling across all record-management operations

SKILLS

- **Languages:** Python, C++, Java, C, SQL
- **ML / Data Science:** AI/ML, Computer Vision (OpenCV, MediaPipe), TensorFlow, NLP
- **Web & Frameworks:** React, Django, HTML, CSS, Flask
- **Cloud:** AWS, Azure
- **CS Fundamentals:** DSA, OOP, Computer Organisation, Operating Systems

CERTIFICATIONS

- Microsoft Certified: Azure AI Fundamentals (AI-900)
- Microsoft Certified: Azure Fundamentals (AZ-900)

ACHIEVEMENTS

- Leetcode Contest Rating : 1595 (Top 25.39%)
- Hackathon participant - Deviathon (National Level), CodeSlayer2k25 (NIT Delhi), Internal Smart India Hackathon, AI Summit Hackathon 2025
- Founding Team Member, Training & Placement Club, GLA University, Gr. Noida Campus (2024)
